MCRT [®] 48700V/49700V/59700V Non-Contact

Digital Torquemeters

Torque Ranges: 25 to 4,000,000 lbf-in (2.83 to 452,000 N-m)

- 0.05% Accurate Analog(s) of Shaft Torque, Speed (option) and Power (option)
- Engineering Unit Digital Output Via Com Port; PC Interface Software Furnished
- Supports 33 Units of Measure Without Recalibration
- Eleven Selectable Constant Delay Signal Filters
- Hardened to EMI From Adjustable Speed Drives
- Remote, Bidirectional NIST Traceable Calibration*
- Requires a Single, Unregulated DC Supply
- 200%, 400%, 1000% Overload Ratings
- 0.02% Noise and Ripple
- No Manual Adjustments

*NIST traceable calibration performed in our accredited laboratory (NVLAP Lab Code 200487-0). For details visit www.himmelstein.com or follow the accreditation link at www.nist.gov.

These strain gage torquemeters measure and output **shaft torque in analog and digital form. A zero velocity speed option adds speed <u>and</u> computed shaft power.** Null, scaling and units of measure are stored in non-volatile memory. *There are no noisy pots or switches.* Thirty three common units of measure are supported. Eleven selectable Bessel filters avoid delay distortion and overshoot errors. Input power is a single, unregulated, reverse polarity protected dc supply. If you re-calibrate, previous calibrations are archived. Use pin strapping or PC commands for zeroing and to enable simultaneous, traceable* torque and, if present, speed and power calibrations. Password protection may be invoked. Included software interfaces Windows-based PC's. It displays and plots real time data, and does time and X-Y plots (with speed/power option). Use it to select 5V or 10V analog outputs, filters, scaling, units of measure and/or to control measurements.

Torque, Speed and HP, use a Model 733. See Bulletin 372.

To power and display Torque only, use a Model 703.

2490 Pembroke Avenue, Hoffman Estates, Illinois 60169 • Tel: 847/843-3300 • Fax: 847/843-8488

To power and display

Both shaft end and flanged models are manufactured with 200%, 400% (MCRT® 49700V) and 1000% (MCRT® 59700V) overload ratings. Shaft end torquemeters are the choice for most applications. They are less costly and can be floated or foot mounted; a foot mount option is available on shaft end units. A flanged torquemeter must be installed as a floating shaft.

Flanged torquemeters are much shorter than shaft end units. Thus, flanged models are used when axial space is limited. Flanged models handle large* axial loads without special mounting considerations. They are often used in marine or vehicular drives, to support the weight and thrust of a mixers' impeller, and in other similar circumstances.

* generally a thrust in pounds equal to the full scale torque rating in pound-inches.

| Common Specifications | Code N Performance (Available on all models) | Code C Performance (Available on ranges ≥50 lbf-in) (Not available on MCRT®59700V Series) | | | | | | |
|--|--|---|--|--|--|--|--|--|
| Torque and Speed (Option) Ranges | Factory Set @ Transducer Full Scale Torque and Max | kimum Speed. Field Resettable to any lower value. | | | | | | |
| Power (Option) Range – See Note 1 | The Power Range is the Product of Transducer Full Scale | e Torque, Speed Range and a Stored Scaling Constant. | | | | | | |
| Units of Measure | Default units are lbf-in and, if the Speed Option is specifie specified or user entered with a PC and furnished softwar | | | | | | | |

| Analog Output & Cal Enable Connector Pinout | A: Power (option) B: Speed (option) C: Torque D: Common E: CCW Cal F: CW Cal G-K: No Connection | | | | | | | |
| Remote Computer Control | All functions can be controlled and/or selected via | emote PC using furnished software and Com Port. | | | | | | |
| Remote Control Via Cal Enable Connector | For CW Cal short Pin F to D, for CCW Cal short Pin E | to D, to Zero short Pins E and F to D for 5 seconds. | | | | | | |
| Power & Com Port Connector Pinout | INPUT POWER # A: + In B: Common | COM PORT 🖙 A: TXD B: RXD C: Ground D: No Connection | | | | | | |

Torque and Speed (option) Ranges may be set at any value \leq Transducer Full Scale Ratings. For example: If the set Torque 1. range is 10,000 lbf-in, and the set Speed range is 5 krpm then Power (option) Range = 10,000*5,000/63,025 = 793.34 horsepower = 10V analog output.

4. Torque signal bandwidth upper limit is 200 Hz determined by integral Bessel response filters. The transducers' self resonant frequency is > 1 kHz.

5. Reverse polarity protected

Assumes torque range is set to the device full scale torque rating.

"deg. F." denotes "degree Fahrenheit". 6.

CW torque causes the shaft to turn CW when viewed from its driven end. CCW torque causes the opposite rotation. Power 3. polarity tracks torque.

7. Specifications are subject to change without notice.

Order № 🖙 MCRT[®] 48761V (1-4) Ν Ν z Model Number Range Performance Code: N or C Foot Mount: N if no, F if yes Speed/Power Option: Z if yes, N if no An MCRT® 48761V(1-4)NNZ is a flanged, 10,000 lbf-in Torquemeter with standard performance, no foot mount and with Speed/Power option.
