Learn How We're Providing Tighter Tolerances of Critical Machined Parts

In our ongoing effort to provide you with the best product quality, we installed a Zeiss Accura Coordinate Measuring Machine in an environmentally controlled room. View this [video](#) to find out how we offer more consistent dimensional control of all our machined parts. There's a reason our torque sensors last for decades!

C-Face Reaction Torque Transducers

Series CF2800V Torquemeters mate directly with NEMA C-Face motors and generators. Torque ranges from 5.65 to 2,260 Nm, digital and analog communications, and an overload rating of 500% make the CF2800V your optimal torque measurement device. [Learn more](#) about the specifications!

Torque Testing Application Note

Our Bearingless torque sensors have been successfully used in transmission tests in domestic wind power, shipping, railway, automotive, and other industries. Read this application note to learn how its excellent performance, high reliability, and low maintenance provides the most reliable torque solution and reduces maintenance costs.

5mm Gap Helps Wind Power Gearbox Testing

An S. Himmelstein and Company Bearingless Torque Sensor Application

The wind power industry has developed rapidly as governments around the world have deepened their understanding of the increasingly demanding issue of environmental pollution. Science and technology have continuously improved the use of renewable energy. In recent years, governments have continued to increase the development and utilization of renewable energy and wind energy.

The wind power gearbox is an extremely important part of the wind turbine—the wind energy is transmitted to the generator set through the gear pair to increase the speed. Its reliability and durability directly affect the service life of the entire wind turbine. The location of the wind farm is generally located in the mountains or offshore areas with harsh environments.

Time for Trade Shows!

Steve and Cyndi are finally hitting the road again! Come out and discuss your torque application with them in booth 10014 at the Auto Test Expo in Novi, MI from October 26 - 28.

Or contact us at sales@himmelstein.com

Focused exclusively on torque sensors since 1960, [Himmelstein](#) designs and makes the world's best torque sensors, transfer standard, and instrumentation. Products include rotating and reaction sensors from 10 ozf-in to 22,000,000 lbf-in in virtually every mechanical configuration. All are calibrated CW and CCW to full capacity in our ISO/IEC17025:2017 accredited laboratory.
