

Model 2080 & 2090/2092 Precision, High Capacity Hollow Flanged Reaction Torquemeters

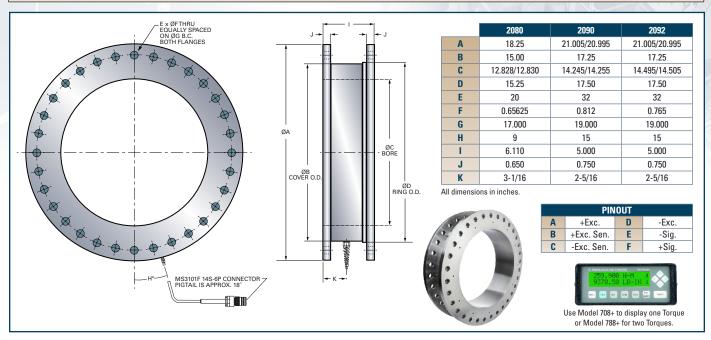

hese large bore, high capacity torquemeters use multiple strain gage bridges to help achieve excellent performance and high torsional stiffness. Advanced design and manufacturing methods, together with optimal selection of critical materials, reduce the effects of temperature gradients and extraneous loads.

Torsional elements are machined from 15-5PH; a high strength stainless steel with outstanding transducer properties. The short length allows use in pump and drill rigs, etc., without major changes to existing machinery. See Bulletin 770 for the theory of reaction torque measurement and for definitions of extraneous loads.

Standard Ratings

						Maximum Extraneous Loads			
Torque	Range	Torque (Overload Torsional Stiffness ¹ Thrust (F) ² B		Thrust (F) ²		Bending Moment (W x D) ²

Notes: 1. Conservatively rated from *flange face-to-face*. 2. See Bulletin 770 for definition of extraneous loads.

Specifications

Bridge Impedance: (Ohms, Nominal)	350
Output: (mV/V, Nominal)	
Zero Unbalance: (% of Full Scale)	≤±1
Combined Error: (% of Full Scale)	≤±0.1
(Includes effects of nonlinearity, hysteresis and return to zero load)	
Nonrepeatability: (% of Full Scale)	≤±0.05

Zero Drift: (% of Full Scale/Degree F)	≤±0.002
Span Drift: (% of Reading/Degree F)	≤±0.002
Compensated Temperature Range: (Degrees F)	. +75 to +175
Usable Temperature Range: (Degrees F)	65 to +225
Maximum Allowable Excitation: (Volts, ac or dc)	15
Extraneous Load Crosstalk: (% of Full Scale, Typical)	1

Specifications and dimensions are subject to change without notice. Certified drawings are available on request.
