

# MCRT® 84700V BEARINGLESS DUAL RANGE DIGITAL TORQUE SENSORS

High Ranges: 500 to 100,000 lbf-in (56.5 Nm to 11,300 Nm) Low Ranges: 100 to 20,000 lbf-in (11.3 to 2,260 Nm)

BEST\* REAL WORLD ACCURACY
OF ANY TORQUE SENSOR OR
TORQUE TRANSDUCER

Widest Installed Measurement Bandwidth and Fast Installed Response
Simple to Install, Tolerant of Wide Rotor-Stator Misalignment
Lowest Sensitivity to Clamping Loads
Highest Overrange and Overload
0.03% Combined Nonlinearity and Hysteresis
Noise Tolerant Carrier Amplification
BI-Directional Rotor Shunt Calibration
No Hoop or Caliper Antennae

- Digital Output of Torque & Temperature
- Analog and FM Outputs
- 3 kHz Signal Bandwidth

- Max/Min's Updated at 20 kHz
- 200% & 1,000% Overload, 300% Overrange
- 0.0003%/°F Compensation
- 0.036% Accuracy Class
- 13 Bessel Data Filters
- Interface Software Furnished

\*NIST traceable calibration performed in our accredited laboratory (NVLAP Lab Code 200487-0). For details visit www.himmelstein.com or follow the accreditation link at www.nist.gov.

CRT\* 84700V Dual Range Torquemeters measure high and low torques with high accuracy and without the cost and inconvenience of swapping two conventional sensors. They correctly measure torque if the peak to average ratio is high. Their use avoids the accuracy loss that occurs if an oversized sensor is used to prevent damage.

Accuracy is high in real-world applications, not just in the cal lab. That's due, in part, to very high stiffness which yields wider installed bandwidth and faster response than competitive device. Industries' highest Overrange avoids errors from clipped torque peaks. Carrier amplification, immune to dc and low frequency ac, handles strain bridge signals. Also enhancing real world performance is noise hardening against EMI from VFD's, ISM transmitters and other noise sources.

Each range is calibrated to full scale with 8 to 9 CW and CCW steps (17 to 20 total) and documented by a NVLAP approved certificate certifying NIST traceability and that our laboratory operation and quality management system meet ISO/IEC17025:2017. A Bi-directional rotor shunt cal verifies calibration and operation of the entire data chain in *CW and CCW modes*. It is invoked via stator switches, I/O line or from your computer.

Multiple bridges and elegant design provide *exceptional immunity to clamping and other extraneous loads*. The torque signal is digitized on the rotor and sent to the stator where analog, frequency and Com Port outputs are created. Choose RS232/RS422/RS485 or USB communications. Included software interfaces with your Windows-based PC. It displays Real-time, Max/ Min and Spread Torque, Rotor Temperature, checks limits, does torque time plots and stores test results.

<sup>1.</sup> See Application Note 221101D 2. See Application Note 20805B

Common Specifications*	High Range	Low Range							
Torque Range <sup>1</sup>	Factory Set @ Transducer Full Scale Torque; see Note 1.								
Torque Units of Measure	Select lbf-in, lbf-ft, ozf-in, ozf-ft, N-m, kN-m, N-cm, kgf-m, kgf-cm, gf-cm without re-calibration.								
Temperature Units of Measure	Select °F or °C without re-calibration.								
Combined Nonlinearity & Hysteresis (% of Range, Best Fit Line Basis – see Tech Memo 230104)	≤ ±0.03% of High Range	≤ ±0.05% of Low Range							
Overrange <sup>2</sup> (% of Range)	150	300							
Overload (% of Range)	200	1,000							
Repeatability	≤ ±0.01% of Range	≤ ±0.015% of Range							
Accuracy Class <sup>3</sup>	≤ ±0.036%	≤ ±0.05%							
Calibration Signal <sup>4</sup>	100.00% of full scale for clockwise	and counterclockwise directions.							
Zero Drift (% of Range per °F/ per °C)	≤ ±0.0003/0.00054	≤ ±0.0015/0.0027							
Span Drift (% of Reading per °F/ per °C)	≤ ±0.002/0.0036	≤ ±0.002/0.0036							
48 Hour Drift (% of Range - applies to all outputs)	≤ ±0.02	≤ ±0.10							
Temperature Ranges (°F/°C)	Compensated Range: +75 to +175/+24 to + Storage Range: -68	•							
Rotor to Stator Maximum Misalignment (inches/mm)	Axial: ±0.4/10.2, Radial: 0.3/7.6 with or without Optical (Code O) Speed Pickup Option.  If Magnetic (Code Z) Speed Pickup Option is installed, then both maximums become 0.04/1.0.								
Effect of Clamping Loads (% of Range)	≤ ±0.02	≤ ±0.1							
Analog Output Signals <sup>5</sup> , Auto-Scaled	Allowable Load: 10k resistive, minimum; 0.05µF capacitive, maximum.								
Full Cools Towns Dath Danges	±10V with ±15V overrange. User may select ±5V with ±7.5V overrange. <b>Caution</b> : see Note 2.								
Full Scale Torque, Both Ranges	±5V with ±15V overrange. User may select ±10V with ±15V overrange. <b>Caution</b> : see Note 2.								
Signal Filter Cutoff Frequency <sup>6</sup>	From 0.1 Hz to 1 kHz in thirteen 1–2–5 steps plus 3 kHz. Selected from a remote PC using furnished software.								
Frequency Modulated Output⁵	Frequency: 10±5/20±10/40±20 kHz; field changeable (Default = 10±5 kHz); TTL square wave output.								
Peak-Peak Digital Output <sup>5</sup> Noise vs Filter Cutoff Frequency (% of Range)	0.0002 @ 0.1Hz and 1Hz, 0.004 @ 10Hz, 0.011 @ 100Hz, 0.04 @ 1 kHz, 0.06 @ 3kHz	0.001 @ 0.1Hz and 1 Hz, 0.02 @ 10 Hz, 0.05 @ 100 Hz, 0.2 @ 1kHz, 0.2 @ 1kHz, 0.3 @ 3kHz							
Peak-Peak Analog Output <sup>5,7</sup> Noise vs 10V Range vs Filter Cutoff Frequency (millivolt)	4 @ 0.1Hz thru 10Hz, 5 @ 100Hz thru 1kHz, 6 @ 3kHz	4 @ 0.1 Hz thru 10 Hz, 8 @ 100 Hz, 17 @ 1kHz, 28 @ 3kHz							
Torque Sampling Rate and Bandwidth	20kHz. 3dB bandwidth is 3kHz reduc	ible by filters (see Note 6 & above).							
Rotor-to-Stator Transfer Rate	1.25MBaud								
RS232/RS422/RS485/USB Communication <sup>8</sup>	Outputs Torque and Temperature with units of measure. Inputs torque range if other than sensor full scale, selects units of measure, selects filter cutoff, etc. and permits remote test control.								
BAUD Rate	115,200; Drivers are protected for short circuit (current limit) and ±15kV ESD protected.								
Maximum Cable Length	RS232 = 50 feet, RS422/485 = 4,000 feet; 120 Ohm termination may be accessed via software.								
Interface Software With Torque Limits	Provided to interface with Windows-based PC. Includes 20 foot interconnected cable for a PC.								
I/O Lines and FM Output <sup>5</sup>	Input lines are +CAL, -CAL, TARE, CLEAR TARE, and TOGGLE RANGE. Output lines are Data OK & FM Out.								
Status LEDs (on Stator Keypad)	3 LEDs: <b>Power</b> (Yellow = Power-up, Green = OK, Red = Fault); <b>Data</b> (Green = OK, Red = Data Error); <b>Rotor Temperature</b> (Green = In Operating Range, Red = Out of Operating Range).								
Keypad Control Switches	+ CAL invokes CW Rotor Shunt Cal, -CAL invokes CCW Rotor Shunt Cal, Both held simultaneously for 5 seconds invokes TARE.								
Rotor Temperature	Rotor temperature is output via Com Port. Range is 0 to 185°F. Accuracy is ±2°F.								
Optional Zero Velocity Speed Pickups	Optical and Magnetic pickups output pulse train.	Magnetic type restricts misalignment; see above.							
Supply Voltage/Power <sup>9</sup>	10 to 26 VDC @ 6 to 11 Watts nominal, varies with rotor misalignment.								

### **Specification Notes:**

- 1. Outputs may be set at any value equal to or less than the Torquemeter Full Scale Rating. For example: If the Full Scale Rating is 10,000 lbf-in, the user may re-scale to 5,000 lbf-in. Then the analog output would be 5 or 10 Volts at 5,000 lbf-in and the digital output, at the Com Port, would be 5,000 lbf-in. However, the above specification still defines measurement accuracy. In other words, you can use this capability to change the scaling but it will not change measurement accuracy; see Application Note 20804 for further details on Torquemeters operated with extended measuring range.
- 2 In the overrange region all outputs are guaranteed to have combined nonlinearity and hysteresis lower than 0.1% of full scale. This avoids large average and peak torque errors that driveline resonance and pulsating driver and load devices can cause near the high end of the sensor range. See Application Note 20805B for more complete information. Torquemeters have infinite fatigue life for full reversals up to half their overload rating. Above that, you risk a fatigue failure.
  - If you are using the analog output, it is linear up to 15 volts. That corresponds to 150% of full scale on the 10 volt output setting and 300% on the 5 volt output setting. Accordingly, when using the analog output and if you expect torque peaks greater than 150% of full scale, you should switch to the 5 volt setting.
- The greatest of Combined Error, Repeatability, Zero Drift and Span Drift over 18 °F (10 °C). It is expressed as a percent of full scale.
- CW torque causes CW rotation if viewed from the driving end. CCW torque causes the opposite rotation.

- Power input and all outputs are protected. Digital inputs are reverse polarity and over-voltage protected.
- Torque signal bandwidth upper limit is 3 kHz determined by the integral
  anti-aliasing filter. Realizable, installed measurement bandwidth is limited by
  driveline components. A Torquemeter's principle contribution is determined by its
  torsional stiffness; see Application Note 221101D for further information.
- Analog noise is measured by an Agilent U1520A Scope with bandwidth set to 10 kHz.
- 8. A 20 foot long Torquemeter to RS422/485 PC port cable is shipped with each Torquemeter. That communication protocol provides for long, robust connection in a noisy industrial environment, and permits connection of multiple Torquemeters to a single, host computer. An optional USB to RS422/485 adapter is available (P/N 330-0003) if your PC has only USB ports.

Should you prefer to use the RS232 interface and your computer has an integral RS232 port, you can order a Torquemeter to PC cable, P/N 224-8359-20 is a 20 foot cable, P/N 224-8359-50 is a 50 foot cable. If your PC does not have an integral RS232 port, then you should use the RS422/485 interface per above because it provides superior noise immunity due, in part, to the symmetrical signal format, balanced cabling, etc.

9. Fused and reverse polarity protected.

\*Specifications are subject to change without notice.

### EXCEPTIONAL IMMUNITY TO NOISE AND INTERFERENCE FROM ISM TRANSMITTERS

Bearingless Torquemeters use unshielded antennae. As a result, any device (including a like Torquemeter) operating at or near their carrier frequency, can cause interference. FCC rules allow ISM devices to generate unlimited energy. Because most Bearingless Torquemeters use an ISM frequency for data transfer, they are susceptible to interference from other ISM devices. Since FCC rules only allow narrow band (typically ±7 kHz) transmission for unlicensed use, wideband ISM frequency Torquemeters risk violation of FCC regulations. Himmelstein Bearingless Torquemeters use non-ISM frequencies for power and data, have field strengths within FCC rules, powerful 12 pole signal filters and near field (not radiated field) signal transfer.
